(MON) 11. 8' 04 17:32/ST. 17:30/NO. 4860347199 P

Amendments to the Claims:

FROM TREXLER ETAL.

(Currently Amended) A nut-plate riveter comprising: a handle; a plurality of

pistons disposed in the handle; cavities proximate the pistons for pressurizing the pistons; air

supply passages in communication with the cavities for supplying air to the cavities to pressurize

the pistons; and a piston rod threadably engaged with at least one of the pistons such that an air

passage is provided at the engagement whereby air can pass between the piston rod and the

piston, said piston rod providing at least one orifice for allowing passage of air between the

piston rod and the cavities and having a longitudinal bore therethrough configured to receive a

spent mandrel.

2. (Currently Amended) A nut-plate riveter as recited in claim 1, wherein the

plurality of pistons disposed in the handle comprises a front piston and a rear piston, wherein the

piston rod extends through the front piston and is securably engaged with the rear piston.

3. (Currently Amended) A nut-plate riveter as recited in claim 1, wherein the

plurality of pistons disposed in the handle comprises three pistons.

4. (Currently Amended) A nut-plate riveter as recited in claim 1, further comprising

a deflector fitting disposed at an end of the nut-plate riveter.

5. (Currently Amended) A nut-plate riveter as recited in claim 1, wherein the piston

rod is cylindrical and includes orifices which are configured to allow the passage of air.

FROM TREXLER ETAL.

6. (Currently Amended) A nut-plate riveter as recited in claim 1, further comprising

a bulkhead which engages an exterior surface of one of the pistons and contacts a wall in the

handle.

7. (Currently Amended) A nut-plate riveter as recited in claim 1, further comprising

a trigger on the handle for actuating the nut-plate riveter.

(Currently Amended) A nut-plate riveter as recited in claim 1, further comprising 8.

a front cap sub-assembly comprising a front cap and a bumper member disposed in the front cap,

wherein an end of said handle is configured to receive the front cap sub-assembly.

9. (Currently Amended) A nut-plate riveter as recited in claim 8, wherein the front

cap threadably engages the end of the handle.

10. (Currently Amended) A nut-plate riveter as recited in claim 1, further comprising

a pulling head which is engaged with said piston rod.

11. (Currently Amended) A nut-plate riveter as recited in claim 10, wherein said

pulling head comprises a nosc fitting, a sleeve and a drawbar, said sleeve being threadably

engaged with said nose fitting, said drawbar being disposed in said sleeve and threadably

engaged with said piston rod.

- 12. (Currently Amended) A nut-plate riveter as recited in claim 11, wherein said pulling head further comprises a jaw follower sub-assembly and a jaw set, said jaw follower subassembly being disposed in the drawbar and contactably engaged with said jaw set.
- (Currently Amended) A nut-plate riveter as recited in claim 12, wherein said 13. pulling head further comprises a follower spring, said jaw follower sub-assembly engaged with said follower spring, said follower spring being engaged with an interior surface of the piston rod.
